## Destination Update Request Form via NetX360®

Please use the new Service Center request form, Destination Update, for changes to your file’s destination description, to add the business date to your file name, or to request password changes for InfoDirect and FTP. Some destination IDs are used by multiple firms and must retain their current descriptions. Therefore, such change requests cannot be honored.

## Standard File Delivery Infrastructure Changes

Later this year, to maintain optimal efficiency in our Standard File Delivery Infrastructure system, we will eliminate inactive configurations that are older than two years. As a result, you may notice a reduced number of older requests accessible via the Destination—Extract Criteria summary screen.

## Service Provider Quarterly Forum

On Wednesday, October 30, 2013, Pershing will host a conference call for third-party service providers who aggregate data on behalf of Pershing broker-dealers. The agenda, moderated by Pershing content subject matter experts, will include a review of the quarterly update. Invitations will be sent to all eligible providers shortly.

## File Encryption Changes

As previously announced, to better secure nonpublic private information transmitted through standard files, Pershing has ceased accepting new transmission requests for unencrypted FTP, and unencrypted FTP with PGP, over Port 21. As of September 2, 2013, the following options are now available:

- SFTP (SSH) or FTPS (SSL/TLS)
- SFTP (SSH) with PGP, or FTPS (SSL/TLS) with PGP, for Internet
- Router Encryption for VPN and Dedicated Circuit transmissions

## Retiring Standard Files

Due to stricter data privacy regulations, we are aggressively terminating retired files containing personal data. The files will not be subject to remediation or updates and will not be added to any new destinations. We recommend that you migrate to the replacement file within one year of a file’s retirement date. **Failure to do so may result in additional standard file-related charges to your firm. Retired files can stop transmitting and penalty charges may apply any time after the dates indicated.**

## Standard File 2013 Holiday Processing

Pershing follows the holiday schedule of the New York Stock Exchange® (NYSE®) and, with some exceptions, **will not run batch processing on the evenings or the following mornings of Thanksgiving Day (November 28) and Christmas Day (December 25).**

**Exceptions.** Please note the run date in file headers, as the date of the data does not change on holidays.

- The Audit Trail Report (NSAT) runs 365 days per year, regardless of holidays.
- The Household Group (HHLD) runs Monday-Friday, regardless of holidays.
- The Mutual Fund Prospectus (MFPF) and the NetExchange User Report (MTEN) files will run on NYSE holidays.

**Monday holidays.** Any weekly files scheduled to run on a Monday will be sent with the batch cycle run on Tuesday morning. This includes the Identification Management (IMSF) file. Further, any files that run Friday data on Monday mornings will not be sent until Tuesday morning. This includes the Transfers (ACA2), Annuity and Insurance Commission Data (ASPC), Subscription Products Financial Activity (ASPF), Cost Basis Reporting Service (CBRO), Easy to Borrow (EZBR) and Mutual Fund Dealer Agreements (MFDA) files.

**Friday holidays.** If the holiday falls on a Friday, any files scheduled to run or refresh on Fridays will be sent with the batch cycle run on the preceding Thursday. Because Thursdays preceding a Friday holiday are treated as a Friday, files that would normally deliver Friday data on Monday morning, will deliver Thursday data on Monday morning. This applies to such files as Account Transfers (ACA2) and Easy to Borrow (EZBR).

**Bank holidays.** When banks are closed on **Monday, November 11 (Veterans Day)**, two banking-related files, ACAM Fund Activity (ACTV) and Projection of Systematic Withdrawal (PSWF) will contain only headers and trailers. Please process them accordingly. In addition, the ACAM Fund Balances (FUND) file will be sent on this date with the same data from its previous batch run.
