FILE LAYOUT FOR: CHECK AND FEDERAL FUND DETAIL

GENERAL INFORMATION

File Frequency: Daily
Record Size: 500 characters
Form Name: CKFF

DESCRIPTION

The Check and Federal Fund Detail file (CKFF) contains twelve different types of records. Records A, B, C, D, E, F-G and H-J are all independent of one another.

Record A (Outgoing Wires): Federal Funds and Automated Clearing House funds sent from a customer account at Pershing to a bank or financial organization for the benefit of a customer or an alternate payee designated by the customer. If Record A, position 497 contains a value of "Y" then the A record can be ignored in favor of the expanded information in Record F.

Record B (Check Disbursements): Check processed from a customer account at Pershing via Asset Movement or Asset Management Accounts, to any person, entity, or organization.

Record C (Check Deposits): Check that is presented to Pershing for payment to a customer account via Money Desk, lockbox, branch or other locations.

Record D (Incoming Wires): Federal Funds and Automated Clearing House (ACH) funds sent from a bank or financial institution to Pershing for the benefit of a customer. In cases where position 464 contains a value of "Y" there will be coordinating H, I and J records.

Optional Record E (Payee Information for checks): Payee information on Asset Management Account checks is generated one day (or more) after the information hits the Pershing System. Currently, Record E is generated only for Corestone checks, and can be matched on account and check numbers in most cases. In situations where a client has two checkbooks, it is possible that the same check number can be issued from each. It is possible to create more uniqueness by including the dollar amount of the check in matching logic. Additionally, the E record with the matching payee information will be displayed on the file on a later date than the B record.

Each Record F has a corresponding Record G.

Optional Record F (Outgoing Wires Sourced from Asset Movement - 1st Segment) To coordinate the F and G records, the first F record will match the first G record, and so on.

Optional Record G (Outgoing Wires Sourced from Asset Movement - 2nd Segment)

Each Record H has a corresponding Record I and J. To coordinate the H, I and J records, the first D record that is a wire goes with the first H, I and J record, and so on.

PERSHING STANDARD FILE LAYOUTS

Optional Record H (Incoming Wires - 1st Segment): Contains additional information for Federal Funds and Automated Clearing House funds sent from a bank or financial institution to Pershing for the benefit of a customer. In most cases, this should be the sending bank information.

Optional Record I (Incoming Wires - 2nd Segment)

Optional Record J (Incoming Wires - 3rd Segment)

Records K & L are reserved.

Each Record M has a corresponding Record N:

Optional Record M (Outgoing Non-USD Wires Sourced from Asset Movement - 1st Segment)

Optional Record N (Outgoing Non-USD Wires Sourced from Asset Movement - 2nd Segment)

The file also contains a header record and a trailer record, confirming the beginning and end of the file, the date the file was created and the file's total number of records.
