## FILE LAYOUT FOR: ENTERPRISE BILLING

### GENERAL INFORMATION

File Frequency: Daily  
 Record Size: 750 characters  
 Form Name: EBSF

### DESCRIPTION

The Enterprise Billing Standard File (EBSF) File provides details on all billing events processed by the Enterprise Billing System. Events are represented at the transaction level as recorded by the source application feeding such events to EBS. This provides firms with the ability to track expenses incurred or revenues earned, often times at an account level, facilitating Investment Professional compensation or firm account reconciliation processes across the Broker Dealer organization.

The file maps each individual charge to a NetEx360 ID, user name, and profile, therefore simplifying the process of linking each fee with a specific user. By incorporating this file into a billing or commission system, an IBD can automate the process associated with passing along NetExchange usage and content fees directly to their Investment Professionals.

The EBSF file can be configured only on the IBD level.

The symbol “**B**” is used on our standard files to represent spaces.
