FILE LAYOUT FOR: ORDER/EXECUTION LOG - BOOKS/RECORDS (Expanded)

GENERAL INFORMATION

File Frequency: Daily
Record Size: 750 characters
Form Name: OEGL

DESCRIPTION

The expanded Order/Execution Log for Books and Records file (OEGL) is created from the Books and Records repository, which is updated on a nightly basis. This file primarily focuses on order/execution data requirements for Books and Records processing. It includes information on order changes, order routing, rules engines as well as order executions.

This file contains A, B, C, D, E, F, G, H, I, J, K, L, and M records with the A, B, C, D, E, F, and G records showing the basic order information:

Record A relates to basic information regarding the order except in the case of trade cancels or corrections, which cannot be mapped to the original order. In these cases, there will be L, and possibly M, records only.

Record B relates to Books and Records regulatory information, as well as additional order information.

Record C relates to security-specific information associated with Equity and Option orders.

Record D relates to security-specific information associated with Fixed Income orders.

Record E relates to security-specific information associated with Unit Investment Trust (UIT) orders.

Record F relates to security-specific information associated with Alternative Investments orders.

Record G relates to security-specific information associated with Mutual Fund orders.

Record H relates to the activity associated with Routed orders. There can be several H records per order.

Record I relates to the activity associated with Executed orders. There can be several I records per order.

Record J relates to the activity associated with Rules process.

Record K relates to Comments and other text messages associated with order activity. There can be several K records per order.

Record L relates to trades, trade corrections and cancels occurring after trade execution.

Record M relates to Comments associated to trade corrections and cancels.

PERSHING STANDARD FILE LAYOUTS

For orders where more than one account is involved, the “L” record might not be related to the previous “A,” “B,” and product type records (either C, D, E, F, or G). To identify the matching records, use the Source System Order ID, found on all records in position 024-043. This might occur if a trade is cancelled from one account and corrected into a different account.

The symbol “**B**” is used on our standard files to represent spaces.
